

Security and secure wireless networking is vital to the missions of organizations around the world. For many of our customers, effective management of security isn't just critical to efficient operations, lives depend on it.

With technical expertise acquired through years of real-world experience, extensive training including various CWNP[®] certifications, and access to Fortress Technologies resources, Fortress Professional Services can significantly improve the likelihood of success with even the most daunting wireless and wireless security projects.

Fortress Professional Services can help mitigate your IT project risks by providing

- Expert installation and deployment
- High-quality training
- Timely and effective education
- Expert consulting services
- Transfer of expertise to customer's staff
- Wireless security planning

If your situation requires:

- Shortened installation time
- Fast and reliable deployment
- Seamless integration with existing systems
- Effective user training
- Adoption of efficient processes and best practices
- Security and secure wireless projects to yield measurable results

Then Fortress Professional Services can help you.

Leveraging years of experience in developing and delivering secure wireless networks for the most demanding mission-critical environments, Fortress Professional Services is uniquely qualified to help your organization meet its objectives.
